All Yale Fire Safes are thoroughly tested, both in our internal labs and with independent external testing institutes to withstand extreme temperatures and humidity. A fire test is performed in a furnace where the safe is brought up to a temperature of 927 degrees - simulating the extreme temperatures that occur under a house fire. The Yale Fire Safes are built with the latest technology in fire insulation which gives excellent protection and allows more room for your valuables inside your safe due to the thinner wall thickness.
